Problem 1

```
Code:
#include <stdio.h>
int main() {
         int lower, upper, nrow;
         double step, f, c;
         lower = 0;
         upper = 200;
         printf("Please_input_the_number_of_rows:_");
         scanf("%d",&nrow);
         step = (upper - lower)/(nrow-1);
         f = lower;
         printf("F\tC\n");
         while(f<=upper){
                 c = 5*(f-32)/9;
                 printf("\%.1f\t\%.1f\n\",f,c);
                 f = f + step;
         }
         return(0);
}
Output:
\lstinputlistingse input the number of rows: 13

```

Problem 2

```
Code:
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#define MAX_STRING_SIZE 1000
int main(){
         char *inputstring = malloc(MAX_STRING_SIZE);
         int index = 0;
         if(inputstring = NULL){
                 printf("No_memory!\n");
                 return 1;
         }
         printf("Please_input_a_string:_");
         fgets (inputstring, MAX_STRING_SIZE, stdin);
         while(index < strlen(inputstring)){</pre>
                 if (inputstring [index] <= '9' &&inputstring [index] >= '0')
                          putchar(inputstring[index]);
                 index++;
         printf("\n");
         free (inputstring);
         return 0;
}
```

Output:

Please input a string: My name is Haozhe Zhang 11 3427.aaaaaaa

113427

Problem 3

```
Code:
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#define MAX_STRING_SIZE 1000
int main(){
         char *inputstring = malloc(MAX_STRING_SIZE);
         int index = 0;
         if(inputstring == NULL){
                 printf("No_memory!\n");
                 return 1;
         }
         printf("Please_input_a_string:_");
         fgets (inputstring, MAX_STRING_SIZE, stdin);
         while(index < strlen(inputstring)){</pre>
                 if (inputstring [index] <= 'x' & inputstring [index] >= 'a')
                          inputstring [index] = inputstring [index] + 2;
                 index++;
         }
         printf("\nNew_String_is_");
         puts(inputstring);
         free (inputstring);
         return 0;
}
Output:
Please input a string: abcdefghijklmnopgrstuvwsyz798., i
```

New String is cdefghijklmnopqrstuvwxyuyz798., k

Problem 4

Code:

```
\#include < stdio.h>
int main(){
        int count = 0;
        char inputchar_1, inputchar_2;
        printf("Please_input_a_series_of_words:_");
        inputchar_1 = getchar();
        if (inputchar_1 != EOF)
                 inputchar_2 = getchar();
        else{
                 printf("\nNumber\_of\_words\_is\_0.\n");
                 return 0;
        }
        if (inputchar_1 !='_'&&inputchar_1!='\t'&&inputchar_1!='\n'
           )
                          count ++;
        while (inputchar_2 != EOF) {
                 if (inputchar_1 == '_' | | inputchar_1 == '\t' | | inputchar
                    _1 = ' \ n'
                          if (inputchar_2 !='_'&&inputchar_2!='\t'&&
                             inputchar 2!=' n'
                                  count++;
                 inputchar_1 = inputchar_2;
                 inputchar_2 = getchar();
        }
        printf("\nNumber_of_words_is_%d.\n", count);
        return 0;
}
```

Output:

Please input a series of words: hfiat udhruwei 43.fd 234jk^D Number of words is 4.[language=C]{
